

Professional Services: Proof of Concept Testing

OVERVIEW

For organizations starting a next-generation firewall project, the process of testing a solution is a critical step before placing it in production. With the Proof of Concept (PoC) testing service, get assistance from Palo Alto Networks™ product experts to take a close look at a proposed design, and ensure that it matches with requirements and expectations.

Next-generation firewall experts will work with you to understand your security requirements, network topology, and performance objectives. The consultant will analyze proposed solution and test plan and provide recommendations to ensure a thorough evaluation.

LAB SETUP AND EXECUTION

Palo Alto Networks consultants will assist in the setup of a suitable test environment for proof of concept testing. Customers may choose to use the Palo Alto Networks Proof of Concept center, or stand up the environment at an on-site lab. The consultant will execute the test plan, record the results, and prepare a detailed report on the findings.

TEST REPORTING

Upon completion of the test plan and preparation of the report, the consultant will review the details with your team and provide recommendations for deployment or additional testing. In addition, the consultants will provide knowledge transfer to your engineering team on the next-generation firewall features and implementation of the tested design.

Proof of Concept is an important component of your project plan. With the Proof of Concept testing service from Palo Alto Networks, get a close look at your design from every angle and ensure that your evaluation covers every corner of your security and performance requirements.
