

Palo Alto Networks and FireMon

Technology Segment: Network Security Configuration and Risk Management

The Palo Alto Networks Technology Partner Program includes a select group of partners that deliver solutions or products that interoperate with the next-generation firewall.

HIGHLIGHTS

- Complete support for access and rule compliance at the user and application level
- Configuration and reporting of threat signatures for integrated threat management
- Full on-demand policy compliance audits (PCI-DSS, NIST, etc.) for next-generation firewalls
- Automated firewall analysis and audits to optimize firewall rule-sets and maintain compliance
- Network modeling and access path analysis to troubleshoot application and user connectivity issues

SOLUTION OVERVIEW

Palo Alto Networks and FireMon have partnered to jointly deliver a total lifecycle security solution for enterprise and service provider customers. FireMon provides software that facilitates change management and control of Palo Alto Networks firewalls, increasing management visibility and reducing the total cost of making changes. Streamline your application and user policy base with detailed reports that identify unused rules and describe traffic flow details by rule. The combined solution will accelerate your auditing process and reduce troubleshooting efforts with a radically refined policy for your next generation firewall infrastructure. Palo Alto Networks combined with FireMon will greatly improve your compliance posture with enhanced application visibility and control.

Figure 1 - FireMon's Complexity Report helps identify the firewalls in the enterprise that are candidates for review.

PALO ALTO NETWORKS

Palo Alto Networks™ (NYSE: PANW) is the network security company. Its innovative platform allows enterprises, service providers, and government entities to secure their networks and safely enable the increasingly complex and rapidly growing number of applications running on their networks. The core of Palo Alto Networks' platform is its Next-Generation Firewall, which delivers application, user, and content visibility and control integrated within the firewall through its proprietary hardware and software architecture. Palo Alto Networks' products and services can address a broad range of network security requirements, from the data center to the network perimeter, as well as the distributed enterprise, which includes branch offices and a growing number of mobile devices. Palo Alto Networks' products are used by more than 9,000 customers in over 100 countries.
