

Technology Partner Solution Brief

The Palo Alto Networks Technology Partner Program is comprised of a select group of partners that deliver solutions or products integrated with the next-generation firewall.

SOLUTION OVERVIEW

Palo Alto Networks and LogRhythm have partnered to deliver enterprise-wide threat detection and response through advanced correlation, pattern recognition and automated remediation. The next generation firewalls from Palo Alto Networks capture rich user and application context to enable granular control of applications and prevention of advanced threats. LogRhythm integrates with Palo Alto Networks by collecting and analyzing data in real-time and correlating it against relevant security information tied to user, application and host behavior. Alarms not only warn of advanced threats, but can also be configured to initiate additional remediation by Palo Alto Networks firewalls to actively prevent advanced threats from becoming a reality.

LogRhythm extends the industry-leading capabilities of Palo Alto Networks next-generation firewalls by delivering powerful correlation and pattern recognition for advanced threat detection & response to critical events originating from inside and outside the network. Fully interactive visualization tools and context-aware event management deliver comprehensive capabilities for protecting the network and reducing mean-time-to-resolution (MTTR). Combining Palo Alto Networks next-generation firewalls with LogRhythm's award winning Log Management & SIEM 2.0, File Integrity Monitoring, and Host Activity Monitoring allows customers to efficiently comply with regulations, secure their networks and optimize the availability of their IT infrastructure.

LOGRHYTHM'S SIEM 2.0 PLATFORM DELIVERS:

- Fully Integrated Log & Event Management
- Advanced Correlation and Pattern Recognition
- Independent Host Activity Monitoring
- File Activity Monitoring
- Enterprise-wide Network Visibility
- Powerful, Rapid Forensics
- SmartRemediation™
- Ease-of-Use and Simplified Management

PALO ALTO NETWORKS

Palo Alto Networks™ next-generation firewalls enable unprecedented visibility and granular policy control of applications and content – by user, not just IP address – at up to 20 Gbps with no performance degradation. Based on patent-pending App-ID™ technology, Palo Alto Networks firewalls accurately identify and control applications – regardless of port, protocol, evasive tactic or SSL encryption – and scan content to stop threats and prevent data leakage. Enterprises can, for the first time, embrace Web 2.0 and maintain complete visibility and control, while significantly reducing total cost of ownership through device consolidation.

LOGRHYTHM

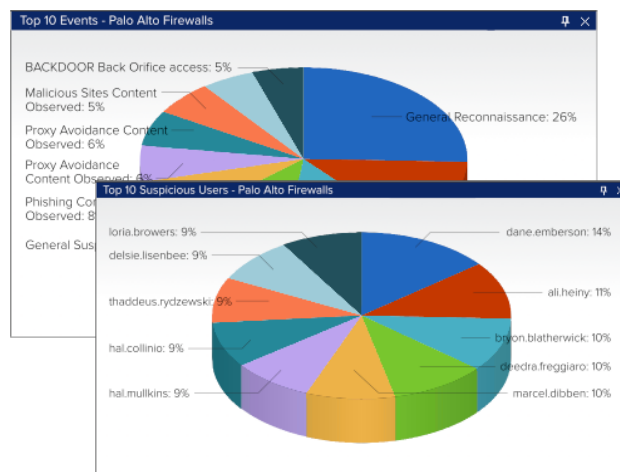

A wealth of valuable information can be derived from log data – originating from applications, databases, servers, network devices or host systems. LogRhythm enables organizations to detect and respond to advanced threats, automate compliance assurance and intelligently optimize IT operations by automating the collection, organization, analysis, archiving and reporting of all log data. By fully integrating Log Management & SIEM 2.0, with File Integrity Monitoring and Host Activity Monitoring in one solution LogRhythm:

- Reduces acquisition costs
- Simplifies ongoing management
- Accelerates compliance
- Increases ROI

It is cost-effective, easily deployed, and scales to fit the needs of any enterprise, and is operated and managed through an easy-to-use, wizard-driven console. With LogRhythm, enterprises can invest in a single solution to address security, compliance, and operations issues related to requirements and challenges throughout their IT organizations.
