

# Palo Alto Networks and NitroSecurity

## Technology Segment: Security Information and Event Management

The Palo Alto Networks Technology Partner Program includes a select group of partners that deliver solutions or products that interoperate with the next-generation firewall.

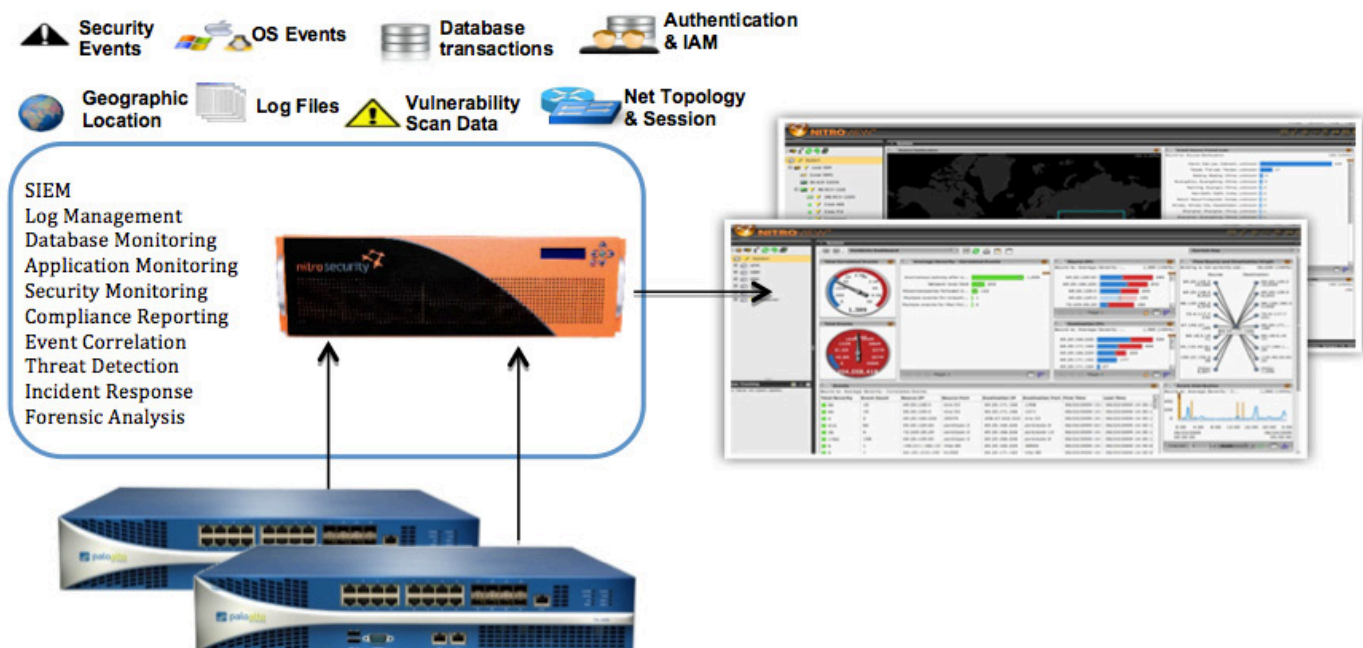

### HIGHLIGHTS

- Complete support for access and rule compliance at the user and application level
- Configuration and reporting of threat signatures for integrated threat management
- Full on-demand policy compliance audits (PCI-DSS, NIST, etc.) for next-generation firewalls
- Automated firewall analysis and audits to optimize firewall rule-sets and maintain compliance
- Network modeling and access path analysis to troubleshoot application and user connectivity issues

### SOLUTION OVERVIEW

Palo Alto Networks and NitroSecurity have partnered to deliver unprecedented visibility, analysis and correlation of security events, user activity, and application usage. Palo Alto Networks' next-generation firewalls capture rich user and application context providing increased control of applications and prevention of advanced threats. NitroSecurity's NitroView platform augments these capabilities adding full content-awareness, network session-awareness and time-adjustable baseline and trend analysis.

NitroView extends the industry-leading capabilities of Palo Alto Networks' next-generation firewalls by storing information created by the Palo Alto Networks firewall and analyzing activity patterns to identify security anomalies, sophisticated attacks, and insider threats. These capabilities enable NitroView to provide a complete solution for compliance reporting, security monitoring, event correlation and advanced threat detection, incident response and forensic investigations. NitroView ESM provides a single pane-of-glass for visibility into and analysis of the high-value data generated by Palo Alto Networks firewalls.

**PALO ALTO NETWORKS**

Palo Alto Networks™ (NYSE: PANW) is the network security company. Its innovative platform allows enterprises, service providers, and government entities to secure their networks and safely enable the increasingly complex and rapidly growing number of applications running on their networks. The core of Palo Alto Networks' platform is its Next-Generation Firewall, which delivers application, user, and content visibility and control integrated within the firewall through its proprietary hardware and software architecture. Palo Alto Networks' products and services can address a broad range of network security requirements, from the data center to the network perimeter, as well as the distributed enterprise, which includes branch offices and a growing number of mobile devices. Palo Alto Networks' products are used by more than 9,000 customers in over 100 countries.

**NITROSECURITY**

NitroView Content Aware SIEM™ is a new generation of Security Information and Event Management solution that provides visibility into the contents of applications, documents and protocols. NitroView looks beyond the surface events provided by device and application logs, providing direct monitoring of data access as well as full application content inspection to monitor how sensitive information is in use. Utilizing the industry's fastest and most scalable data management engine, NitroView easily correlates this highly detailed information along with other logs and events to improve security detection and compliance reporting capabilities.
