

Technology Partner Solution Brief

The Palo Alto Networks Technology Partner Program is comprised of a select group of partners that deliver solutions or products integrated with the next generation firewall.

SOLUTION OVERVIEW

Palo Alto Networks and RSA, The Security Division of EMC, have partnered to deliver unprecedented depth and visibility to enterprise security event analysis. Effectively managing network and security events is considered a best-practice security policy, and for many companies it is a federally mandated requirement. The key to effective security event management lies in the ability to capture and manage thousands of network events in real time so that an organization has the ability to conduct threat analysis as it occurs, or reference them historically. Another crucial element is the ability to classify critical business applications and differentiate them from malicious network activity. Palo Alto Next Generation Firewalls provide rich context around all user and application activity. The RSA enVision® Platform correlates that data with the surrounding network and security ecosystem to enable rapid investigation and provides multidimensional insight into critical events. RSA enVision is designed to give organizations a single, integrated 3-in-1 log management solution for Security Information and Event Management to simplify compliance; enhance the efficiency and effectiveness of security operations and risk mitigation; and optimize IT network operations.

PALO ALTO NETWORKS

Palo Alto Networks™ next-generation firewalls enable unprecedented visibility and granular policy control of applications and content – by user, not just IP address – at 10 Gbps network throughput levels. Based on patent-pending App-ID™ technology, Palo Alto Networks firewalls accurately identify and control applications –

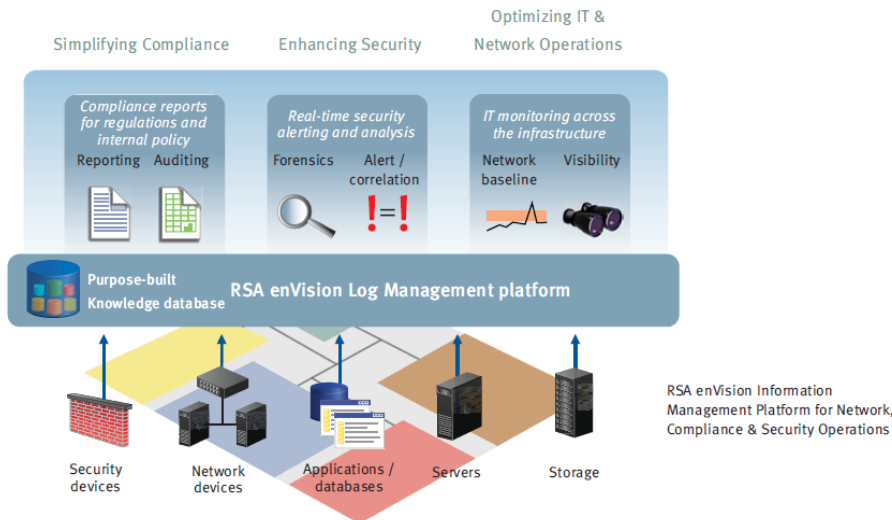

regardless of port, protocol, evasive tactic or SSL encryption – and scan content to stop threats and prevent data leakage. Enterprises can, for the first time, embrace Web 2.0 and maintain complete visibility and control, while significantly reducing total cost of ownership through device consolidation.

RSA, THE SECURITY DIVISION OF EMC

RSA, the Security Division of EMC, is the premier provider of security solutions for business acceleration, helping the world's leading organizations succeed by solving their most complex and sensitive security challenges. RSA's information-centric approach to security guards the integrity and confidentiality of information throughout its lifecycle -- no matter where it moves, who it accesses it or how it is used. RSA offers industry-leading solutions in identity assurance and access control, data loss prevention and encryption, compliance & security information management and fraud protection. These solutions bring trust to millions of user identities, the transactions they perform, and the data that is generated.
