# Technology Partner Solution Brief

The Palo Alto Networks Technology Alliance Program is comprised of a select group of partners to deliver solutions or products that integrate with the next generation firewall.

SOLUTION OVERVIEW

Palo Alto Networks and Solera Networks are combining next generation firewalls with active network forensics to enable security administrators to "see" critical attacks, uncover their root cause and quickly adapt their infrastructure to prevent recurrence and mitigate risk. Palo Alto Networks offers real innovation in the firewall, enabling unprecedented visibility and control of all applications and content -- by user, not just IP address -- at high speed with no performance degradation. As a result, the firewall is once again able to function as a strategic point of network control. Network Forensics Appliances from Solera Networks make all network traffic and data flows instantly visible and replayable, enabling administrators to detect the full source and scope of any network security event and protect the network against further attack. The Solera Networks open architecture seamlessly integrates with Palo Alto Networks next-generation firewalls, instantly providing full-packet level detail to any generated alert and specific details of what happened before and after an alert was triggered, including actual artifacts (documents, files, executables, etc.) recreated from raw network packets.
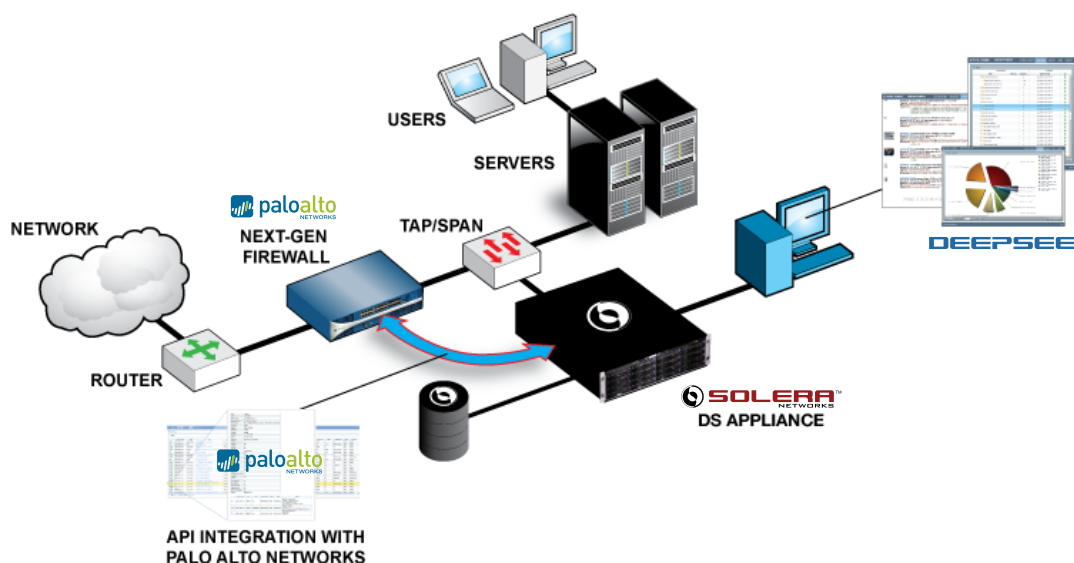

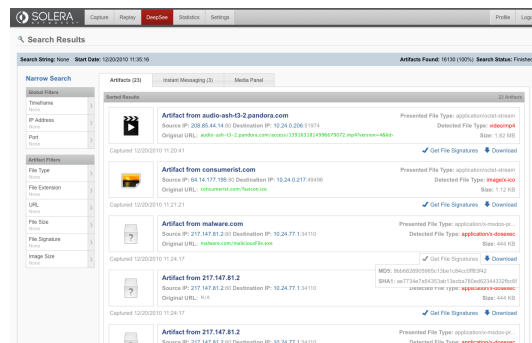

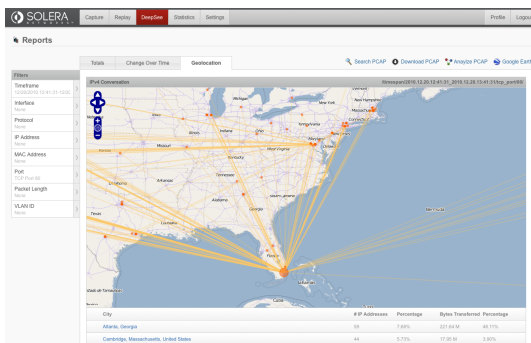

PALO ALTO NETWORKS

Palo Alto Networks™ next-generation firewalls enable unprecedented visibility and granular policy control of applications and content – by user, not just IP address – at 10 Gbps network throughput levels. Based on patent-pending App-ID™ technology, Palo Alto Networks firewalls accurately identify and control applications – regardless of port, protocol, evasive tactic or SSL encryption – and scan content to stop threats and prevent data leakage. Enterprises can, for the first time, embrace Web 2.0 and maintain complete visibility and control, while significantly reducing total cost of ownership through device consolidation.

SOLERA NETWORKS

Solera Networks DS Series is a line of high-performance network forensics appliances, including software-only virtual appliances, which capture, record and archive 100% of network traffic at speeds up to 10Gbps. The data is then accessible instantly via Solera Networks' DeepSee application suite, or via any standards-based network forensics software.
