Palo Alto Networks and Tufin Partnership

Technology Segment: Network Security Configuration Management

The Palo Alto Networks Technology Partner Program includes a select group of partners that deliver solutions or products that interoperate with the next-generation firewall.

HIGHLIGHTS

- Central management of all firewalls, routers and devices.
- Real-time change tracking.
- Instant firewall audits.
- Continuous compliance with standards.
- Proactive risk management.
- Security change automation.

SOLUTION OVERVIEW

As organizations deploy multiple security solutions to safeguard corporate networks from wide-ranging threats, it becomes increasingly difficult to perform labor-intensive and error-prone tasks such as risk analysis, change management, auditing and compliance checks. Palo Alto Networks™ and Tufin™ have partnered to help customers increase operational efficiency and reduce risk by intelligently automating firewall policy management. Together, customers can reduce the work associated with daily change management, ensure business continuity, and maintain continuous compliance with standards.

Tufin Security Suite enables enterprises and service providers to cost-effectively manage their network security policy, comply with regulatory standards, and minimize risks. Tufin offers a complete solution for streamlining firewall operations, auditing and compliance for Palo Alto Networks next-generation firewalls. The solution provides network security teams with seamless, comprehensive operations management and auditing capabilities for Palo Alto Networks firewalls. Together, Palo Alto Networks and Tufin are enabling customers to improve network security and compliance along with operational efficiency by increasing visibility, reducing costs, and enabling continuous compliance with standards.
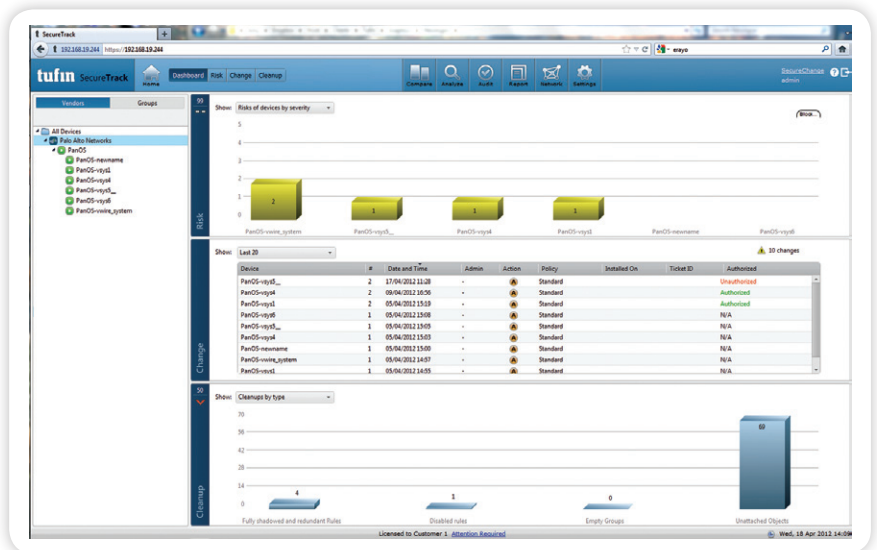

Tufin SecureTrack: Track and optimize security policies, and instantly identify and remediate risks.

Making Security Manageable

PALO ALTO NETWORKS

Palo Alto Networks is the network security company. Its next-generation firewalls enable unprecedented visibility and granular policy control of applications and content – by user, not just IP address – at up to 20Gbps with no performance degradation. Based on patent-pending App-ID™ technology, Palo Alto Networks firewalls accurately identify and control applications – regardless of port, protocol, evasive tactic or SSL encryption – and scan content to stop threats and prevent data leakage. Enterprises can for the first time embrace Web 2.0 and maintain complete visibility and control, while significantly reducing total cost of ownership through device consolidation. Most recently, Palo Alto Networks has enabled enterprises to extend this same network security to remote users with the release of GlobalProtect™ and to combat targeted malware with its WildFire™ service.
