Palo Alto Networks and Zenprise Partnership

Technology Segment: Mobile Device Management

The Palo Alto Networks Technology Partner Program includes a select group of partners that deliver solutions or products that interoperate with the next-generation firewall.

HIGHLIGHTS

- Automatically provision and configure Palo Alto Networks GlobalProtect connectivity for iOS devices.
- Provision, view, and control applications on a wide range of smartphones and tablets.
- Ensure compliance of mobile devices to corporate security policy and best practices.

SOLUTION OVERVIEW

The number of smartphones and tablets accessing data on the corporate networks is exploding. Some of these devices are enterprise owned, while many others are user owned. The new IT challenge deals with balancing security with end-user freedom, particularly on personally owned devices. These challenges intensify when considering the increasing demand for application and data access on smartphones and tablets. These devices and apps create new threat vectors that must be addressed by IT executives to prevent data leakage of sensitive corporate information.

Palo Alto Networks™ has partnered with Zenprise to allow customers to manage, secure, and connect authorized devices to the corporate network through the IT provisioned GlobalProtect™ Gateway. The combination of Palo Alto Networks next-generation firewalls and Zenprise MobileManager™ allows joint customers to extend visibility and control of applications to a wide range of mobile platforms, including smartphones and tablets.
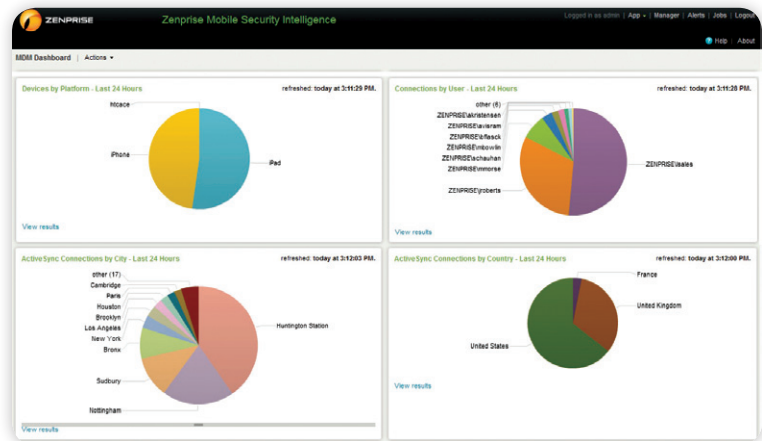

Visibility on Mobile Traffic through Zenprise MobileManager

Zenprise MobileManager can be used to provision and auto-configure Palo Alto Networks GlobalProtect secure connectivity for iOS devices. Users' iPhone and iPad devices automatically receive VPN configurations, including device certificate authentication for additional device and network security. MobileManager simplifies not only the initial deployment of GlobalProtect configuration, but also the ongoing compliance of employee owned iOS devices. Zenprise automatically checks for compliance violations and takes remediation action to proactively prevent security breaches.

Companies can leverage Zenprise's Enteprise App Store to securely deploy internally developed or third party applications directly to user devices. Through GlobalProtect, security and IT administrators can confidently and safely enable access to such applications from employee owned iOS devices.

ZENPRISE
Protecting Mobile Enterprises
Everywhere

PALO ALTO NETWORKS

Palo Alto Networks is the network security company. Its next-generation firewalls enable unprecedented visibility and granular policy control of applications and content – by user, not just IP address – at up to 20Gbps with no performance degradation. Based on patent-pending App-ID™ technology, Palo Alto Networks firewalls accurately identify and control applications – regardless of port, protocol, evasive tactic or SSL encryption – and scan content to stop threats and prevent data leakage. Enterprises can for the first time embrace Web 2.0 and maintain complete visibility and control, while significantly reducing total cost of ownership through device consolidation. Most recently, Palo Alto Networks has enabled enterprises to extend this same network security to remote users with the release of GlobalProtect and to combat targeted malware with its WildFire™ service. ZENPRISE

Headquartered in Silicon Valley, Zenprise is the leader in secure mobile device management. Zenprise MobileManager and Zencloud™ let IT say yes to personal and corporate-owned mobile devices without sacrificing security and compliance requirements. Only Zenprise protects the mobile enterprise end-to-end with the industry's easiest to use MDM solution. This lets executives take their businesses mobile, gives IT peace of mind, and makes employees productive while on the go.
